PROFESSIONAL SUMMARY

Economics graduate (2:1) with applied experience in data analysis, machine learning, and commercial analytics. Built classification models using XGBoost and SHAP for interpretability; deployed Power BI dashboards serving decision-making at scale. Comfortable across the full pipeline from SQL extraction to visualisation.

TECHNICAL SKILLS

- **Languages:** Python, SQL
- **ML / Stats:** scikit-learn, XGBoost, SHAP, hypothesis testing, regressions
- **BI / Tools:** Power BI (DAX, Power Query M), Excel (VBA, Pivot Tables), Git

WORK EXPERIENCE

Mirai Consulting Ltd *Data Analyst (Remote)* Mar 2026 – Present

- Built and maintained Power BI dashboards using DAX and Power Query M for client-facing commercial analytics; reduced manual reporting time by an estimated 4 hours/week.
- Cleaned and transformed datasets (50k+ rows) via SQL queries and Excel, feeding downstream analysis on customer segmentation and revenue trends.
- Applied SHAP-based feature importance analysis to classification models, translating model outputs into actionable client recommendations.

Golden Glass Protection Ltd *Data Analyst Intern (Remote and In-Person)* Jun 2024 – Aug 2025

- Reduced operational costs by 27.7% through data-driven process optimisation: identified bottlenecks in production scheduling using Excel and SQL analysis.
- Automated weekly KPI reporting with VBA macros, replacing a manual 2-hour process with a single-click output.

PROJECTS

F1 Career Analytics: Predictive Classification Model *Python, FastF1 API, scikit-learn, XGBoost, SHAP*

- Engineered features from FastF1 telemetry data (lap times, tyre compounds, track characteristics) across 8 seasons to predict race outcomes.
- Trained XGBoost classifier achieving 66% accuracy; used SHAP values to identify top predictive features, qualifying position, pit stop strategy, and weather conditions.
- Built interactive Power BI dashboard visualising feature importance and model predictions for non-technical audiences.

Econometric Analysis of Corruption on Economic Growth *Python, statsmodels, pandas*

- Applied OLS and panel data regression to World Bank dataset, controlling for confounders and testing model assumptions (multicollinearity, heteroskedasticity).
- Results presented as part of final-year dissertation on corruption.

EDUCATION

University of Greenwich **BSc Economics (Hons), 2:1** Sep 2022 – Jul 2025

- Relevant coursework: Econometrics, Statistics, Quantitative Methods, Financial Economics, Data Analytics, ESG
- Final-year dissertation: Effect of corruption on Economic Growth.
